

## BrightSourced Energy has a long standing relationship with Redrow Homes stretching back more than 10 years

Redrow Homes are one of the UK's leading residential housing developers. They have been offering properties since the 1970s and have grown to become a successful FTSE 250 company.

They were experiencing costly utility bills across their 21 UK sites and were keen to cut spend as quickly and efficiently as possible.

### The Brief:

Redrow Homes wanted to consolidate their utility procurement and drive down costs across their whole portfolio. Additionally they qualified for the government led Energy Savings Opportunity Scheme (ESOS) and were keen to find a qualified Lead Assessor that could help them achieve compliance.

### The Success:

#### Utility procurement –

Through a detailed assessment of their utility portfolio, BrightSourced Energy were quickly able to source and negotiate best prices for their gas, electricity and water rates successfully.

#### ESOS -

Following this success, Redrow engaged with BrightSourced Energy to carry out compulsory audits and increase their profitability and competitiveness by identifying cost-effective savings and improving energy efficiency. Through the qualified team of Lead Assessors and BrightSourced's specialist ESOS software, Redrow were able to achieve total compliance quickly whilst reducing their energy consumption and cost at the same time.

“Redrow Homes have a long standing and ongoing relationship with BrightSourced Energy who's efficient and professional approach have consistently enabled us to broker the best deals available for electricity and gas supplies for our divisional offices across the UK. More recently, they have provided us with valuable assistance in collating data in connection with CRC and carbon footprint reporting and I would thoroughly recommend their services”
